

ATV-MEETING

Organizer	ATV-Technology for Sustainability & Young Water Professionals
Time	May 16, 15.00-17.00
Location	Klimatorium, Havnen 8, 7620 Lemvig + online

WATER: Sustainability, resources, and participatory democracy

Although Denmark has a strong tradition for developing and giving advice on water technology, the sector suffers from a lack of investment in new infrastructure, research, and innovation.

At the same time, challenges such as water supply and water quality have suddenly become more immediate to citizens, who are now hearing about groundwater contamination, floods, and oxygen depletion in coastal sea areas.

At the meeting on the May 16, we will discuss how local solutions contribute to a more sustainable water sector and how these experiences can be applied internationally.

ATV – Danish Academy of Technical Sciences is an independent, member-driven think tank. We strive for Denmark to be one of the top five Science and Engineering regions in the world – for the benefit of future generations. The Academy's members work pro bono on our projects and help to implement recommendations from projects in knowledge environments and businesses.
